

## Chamfered

Survey dimension sheet – all dimensions should be measured from inside. If possible measure in mm and give dimensions to the nearest 5mm. Watch the video to get tips on where to measure from.

	<p><b>Main Plan Dimensions</b></p> <p><i>The most important dimensions are the overall length and width of the space. Measure the width (X1) from fascia to fascia and the length (Y1) from the face of the house wall to the fascia.</i></p> <p>X1 = ..... Y1 = .....</p> <p>Y2 is the length of the side wall. Measure Y2 from the face of the house wall to the start of the first corner.</p> <p>X2 is the width of the front section. Measure X2 between the two front internal corners.</p> <p>X3 is the width of the corner section. Measure between the two internal corners as shown.</p> <p>Y2 = .....</p> <p>X2 = .....</p> <p>X3 = .....</p>
	<p><b>Heights</b></p> <p><i>In order to work out the full area of the roof we need the vertical dimension to the bottom and top of the roof. Measure H1 from the floor to the top of the fascia and H2 from the floor to the underside of the ridge.</i></p> <p>H1= ..... H2= .....</p>

### Ridge Length

*Measure from the wall to the centre of the capping piece. If you have a light or fixture over the capping piece, measure from the middle of that and be sure to include an extra photo of this.*

R1= .....

**Additional Dimensions:** *Use the final section to provide dimensions of any large box outs that may affect the design. If you want you can also include dimensions for opening windows, lights or fans but we will also cover this later in the process if it is required.*
