

Georgian Double Hipped

Survey dimension sheet – all dimensions should be measured from inside. If possible measure in mm and give dimensions to the nearest 5mm. Watch the video to get tips on where to measure from.

 <p>The diagrams show two views of a Georgian double hipped roof plan. The top diagram is a perspective view of the roof structure with a horizontal dimension line labeled 'X1' spanning the width from fascia to fascia, and a vertical dimension line labeled 'Y1' spanning the length from fascia to fascia. The bottom diagram is a side elevation of the roof showing the double hipped structure with a horizontal dimension line labeled 'X1' at the base.</p>	<p>Main Plan Dimensions</p> <p><i>The most important dimensions are the overall length and width of the space. Measure the width (X1) from fascia to fascia and the length (Y1) from fascia to fascia.</i></p> <p>X1 = Y1 =</p>
 <p>The diagram shows a side elevation of the roof. It features two vertical dimension lines: 'H1' on the left, measuring from the floor level to the top of the ridge, and 'H2' on the right, measuring from the floor level to the underside of the ridge.</p>	<p>Heights</p> <p><i>In order to work out the full area of the roof we need the vertical dimension to the bottom and top of the roof. Measure H1 from the floor to the top of the fascia and H2 from the floor to the underside of the ridge.</i></p> <p>H1= H2=</p>
 <p>The diagram shows a side elevation of the roof with a horizontal dimension line labeled 'R1' measuring the length of the ridge from the center of the capping piece to the center of the capping piece.</p>	<p>Ridge Length</p> <p><i>Measure from the centre of the capping piece to the centre of the capping piece. If you have a light or fixture at either end, measure from the middle of that and be sure to include an extra photo of this.</i></p> <p>R1=</p>
<p>Additional Dimensions: <i>Use the final section to provide dimensions of any large box outs that may affect the design. If you want you can also include dimensions for opening windows, lights or fans but we will also cover this later in the process if it is required.</i></p>
