

## Georgian Gable

Survey dimension sheet – all dimensions should be measured from inside. If possible measure in mm and give dimensions to the nearest 5mm. Watch the video to get tips on where to measure from.

 <p>The diagrams show two views of a Georgian Gable conservatory. The top diagram is a rectangular plan view with a vertical center line. A vertical red double-headed arrow on the left is labeled 'Y1', representing the length from the house wall to the front of the conservatory. A horizontal red double-headed arrow at the bottom is labeled 'X1', representing the width from fascia to fascia. The bottom diagram is a gable end view showing a trapezoidal roof. A horizontal red double-headed arrow at the base of the roof is labeled 'X1', representing the width from fascia to fascia.</p>	<p><b>Main Plan Dimensions</b></p> <p><i>The most important dimensions are the overall length and width of the space. Measure the width (X1) from fascia to fascia and the length (Y1) from the house wall to the front of the conservatory.</i></p> <p>X1 = ..... Y1 = .....</p>
 <p>The diagram shows a side elevation of the Georgian Gable conservatory. It features a trapezoidal roof. Two vertical red double-headed arrows are shown. The first, labeled 'H1', is on the left side, measuring from the floor level to the top of the fascia. The second, labeled 'H2', is in the center, measuring from the floor level to the underside of the ridge.</p>	<p><b>Heights</b></p> <p><i>In order to work out the full area of the roof we need the vertical dimension to the bottom and top of the roof. Measure H1 from the floor to the top of the fascia and H2 from the floor to the underside of the ridge.</i></p> <p>H1= ..... H2= .....</p>
<p><b>Additional Dimensions:</b> Use the final section to provide dimensions of any large box outs that may affect the design. If you want you can also include dimensions for opening windows, lights or fans but we will also cover this later in the process if it is required.</p>
