

## Georgian Gable

Survey dimension sheet – all dimensions should be measured from inside. If possible measure in mm and give dimensions to the nearest 5mm. Watch the video to get tips on where to measure from.

 <p>The diagrams show two views of a Georgian Gable conservatory. The top diagram is a rectangular plan view with a vertical center line. A vertical dimension line on the left is labeled 'Y1', and a horizontal dimension line at the bottom is labeled 'X1'. The bottom diagram is a gable end view showing a rectangular base with a triangular roof. A horizontal dimension line across the top of the gable is labeled 'X1'.</p>	<p><b>Main Plan Dimensions</b></p> <p><i>The most important dimensions are the overall length and width of the space. Measure the width (X1) from fascia to fascia and the length (Y1) from the house wall to the front of the conservatory.</i></p> <p>X1 = ..... Y1 = .....</p>
 <p>The diagram shows a gable end view of the conservatory. Two vertical dimension lines are shown. The one on the left, labeled 'H1', extends from the floor level to the top of the fascia. The one on the right, labeled 'H2', extends from the floor level to the underside of the roof ridge.</p>	<p><b>Heights</b></p> <p><i>In order to work out the full area of the roof we need the vertical dimension to the bottom and top of the roof. Measure H1 from the floor to the top of the fascia and H2 from the floor to the underside of the ridge.</i></p> <p>H1= ..... H2= .....</p>
<p><b>Additional Dimensions:</b> Use the final section to provide dimensions of any large box outs that may affect the design. If you want you can also include dimensions for opening windows, lights or fans but we will also cover this later in the process if it is required.</p>
