

Georgian Hipped

Survey dimension sheet – all dimensions should be measured from inside. If possible measure in mm and give dimensions to the nearest 5mm. Watch the video to get tips on where to measure from.

 <p>The diagram shows two views of a Georgian hipped roof plan. The top view is a rectangle with a hipped roof section on the right side. A horizontal dimension line labeled 'Y1' spans the width of the main rectangular part. A vertical dimension line labeled 'X1' spans the height of the hipped section from the top fascia to the bottom fascia. The bottom view shows a similar plan with a hipped roof section on the left side, with a horizontal dimension line labeled 'Y1' indicating the width of the main rectangular part.</p>	<p>Main Plan Dimensions</p> <p><i>The most important dimensions are the overall length and width of the space. Measure the width (X1) from fascia to fascia and the length (Y1) from the house wall to the fascia.</i></p> <p>X1 = Y1 =</p>
 <p>The diagram shows a cross-section of a hipped roof. A vertical dimension line labeled 'H1' is drawn from the floor level to the top of the ridge. A second vertical dimension line labeled 'H2' is drawn from the floor level to the underside of the ridge.</p>	<p>Heights</p> <p><i>In order to work out the full area of the roof we need the vertical dimension to the bottom and top of the roof. Measure H1 from the floor to the top of the fascia and H2 from the floor to the underside of the ridge.</i></p> <p>H1= H2=</p>
 <p>The diagram shows a cross-section of a hipped roof. A horizontal dimension line labeled 'R1' is drawn from the center of the ridge capping piece to the vertical wall.</p>	<p>Ridge Length</p> <p><i>Measure from the centre of the capping piece to the wall. If you have a light or fixture here measure from the middle of that to the wall and be sure to include an extra photo of this.</i></p> <p>R1=</p>
<p>Additional Dimensions: <i>Use the final section to provide dimensions of any large box outs that may affect the design. If you want you can also include dimensions for opening windows, lights or fans but we will also cover this later in the process if it is required.</i></p>
