

## Lean-to Hipped

Survey dimension sheet – all dimensions should be measured from inside. If possible measure in mm and give dimensions to the nearest 5mm. Watch the video to get tips on where to measure from.

 <p>The diagram shows a side view of a lean-to hipped roof. A vertical dimension line labeled 'X1' spans the full height of the structure. A horizontal dimension line labeled 'Y1' is shown at the base, indicating the width from fascia to fascia. A second horizontal dimension line labeled 'Y1' is shown below the main structure, indicating the width of the roof's base.</p>	<p><b>Main Plan Dimensions</b></p> <p><i>The most important dimensions are the overall length and width of the space. Measure the width (X1) from fascia to fascia and the length (Y1) from the house wall to the fascia.</i></p> <p>X1 = ..... Y1 = .....</p>
 <p>The diagram shows a side view of the roof structure. A vertical dimension line labeled 'H1' is shown on the left, measuring from the floor level to the top of the fascia. A second vertical dimension line labeled 'H2' is shown on the right, measuring from the floor level to the underside of the highest point of the roof.</p>	<p><b>Heights</b></p> <p><i>In order to work out the full area of the roof we need the vertical dimension to the bottom and top of the roof. Measure H1 from the floor to the top of the fascia and H2 from the floor to the underside of the highest point of the roof.</i></p> <p>H1= ..... H2= .....</p>
 <p>The diagram shows a top-down view of the roof ridge. A horizontal dimension line labeled 'R1' is shown across the top, measuring from the center of the capping piece on the left to the center of the capping piece on the right.</p>	<p><b>Ridge Length</b></p> <p><i>On the back wall measure from the centre of capping piece to centre of capping piece. If you have a light or fixture at either end be sure to include an extra photo of this.</i></p> <p>R1= .....</p>
<p><b>Additional Dimensions:</b> <i>Use the final section to provide dimensions of any large box outs that may affect the design. If you want you can also include dimensions for opening windows, lights or fans but we will also cover this later in the process if it is required.</i></p>
